

FARYA BAKHSH

Major - BS in Public Administration

Minor - Computer Science

ABOUT ME

From the moment I produced "Hello World" in the console of my first application, I knew I was hooked into the world of software development. But web development has never been "just a job" for me, rather it offered an engaging challenge to continuously learn and improve my skills in creating high quality web-based applications. What started with a simple "Hello World" has become a full-fledged passion that only gets more exciting as time goes by. Here you will find projects I've completed through self-learning that showcase my skills and general background in developing web apps.

Bootstrap
Javascript
jQuery
Angular
React.js
Express
SQL

EDUCATION

BS in Public Administration

9/2019 – 8/2023

NUST H-12, Islamabad

PROJECTS

Ecommerce web Application – Angular and Express

App designed in angular that retrieves data from the backend server – express through HTTP request that sends a JSON response. Routing was added that enables Single Page Application with multiple views.

News Portal – Angular

Generated an Angular Service for the News API and used it dynamically to populate the different sections of the news portal. Data binding was used to dynamically bind article data received as a JSON object to the News Article component views.

Expense Tracker – React.js

Contained input fields to add expenses which are rendered on the page in the form of list. It used functional components while working with multiple states. Child to parent component communication was also implemented.

Food Order App – React.js

Worked with different components to make User interactive Interface. Worked on fetching the data from a simple backend via http response. Added functionality via states, props, fragments, portals and refs
